

Update - LRS: C section auto import function and title notes

As was advised in the recent [staff notice](#), the next improvement to be introduced as part of the registration project of the digital transformation programme (DTP) is the auto import of the C section in applications over the whole of a registered plot (DW's).

This has now been released and the new functionality will be in use from today, Friday 6 November.

The processes for DW settlers in the 2012 Act registration manual are in the process of being updated to take into account these changes.
